Abstracts

The global Phosphorus Enriched Organic Manure market size is expected to reach \$ 909 million by 2030, rising at a market growth of 4.4% CAGR during the forecast period (2024-2030).

Rising Demand for Organic Farming Practices: With growing concerns about chemical fertilizers' environmental impact and consumer preferences for organic produce, there is an increasing demand for organic farming practices. Phosphorus-enriched organic manure, derived from natural sources such as compost, animal manure, and plant residues, aligns with this trend as it provides essential nutrients to crops while improving soil health and fertility. **Focus on Sustainable Agriculture:** Sustainable agriculture practices, including the use of organic fertilizers like phosphorus-enriched organic manure, are gaining traction globally. Farmers are recognizing the long-term benefits of organic inputs in maintaining soil structure, reducing soil erosion, and minimizing nutrient runoff into water bodies. **Government Support and Regulations:** Government initiatives promoting organic farming and sustainable agricultural practices are driving market growth for phosphorus-enriched organic manure. Subsidies, incentives, and regulatory frameworks supporting organic agriculture encourage farmers to adopt organic fertilizers as part of their nutrient management strategies.
