## Abstracts

According to our (Global Info Research) latest study, the global Phosphotungstic Acid Negative Staining Solution market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Phosphotungstic acid negative staining solution is suitable for displaying macromolecules, bacteria, viruses, protozoa, phages, organelles, nucleic acid macromolecules, protein crystals and other macromolecular materials. The image of the stained sample is transparent and bright, while the background image is black. Negative staining, also known as negative staining, is a staining technique discovered by Hall compared to ordinary staining (i.e. positive staining). The 'mass-thickness' difference between the structures enhances the scattering-absorption contrast.
