## Abstracts

The global Phosphotungstic Acid Negative Staining Solution market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Phosphotungstic acid negative staining solution is suitable for displaying macromolecules, bacteria, viruses, protozoa, phages, organelles, nucleic acid macromolecules, protein crystals and other macromolecular materials. The image of the stained sample is transparent and bright, while the background image is black. Negative staining, also known as negative staining, is a staining technique discovered by Hall compared to ordinary staining (i.e. positive staining). The 'mass-thickness' difference between the structures enhances the scattering-absorption contrast.

This report studies the global Phosphotungstic Acid Negative Staining Solution production, demand, key manufacturers, and key regions.
