Abstracts

The global Photo Activated Debondable Structural Adhesive market size is expected to reach \$ 589 million by 2032, rising at a market growth of 14.2% CAGR during the forecast period (2026-2032).

In 2024, global photo activated debondable structural adhesive production reached approximately 3,004 ton, with an average global market price of around USD 75,000 per ton. A factory gross profit of USD 22,500 per ton with 30% gross margin. A single line full machine capacity production is around 25 ton per line per year. downstream demand is concentrated in electronics, automotive & electronic vehicle, medical and industrial equipment. In smartphone manufacturing, photo-activated debondable structural adhesives are used to bond display modules to aluminum frames, allowing manufacturers to remove and replace damaged screens using controlled UV exposure without deforming the housing. A Photo Activated Debondable Structural Adhesive is a high-strength glue that cures under light (like UV or visible light) to form strong bonds, but can be triggered by specific light wavelengths to break apart cleanly, enabling easy disassembly, repair, and recycling of components in electronics, automotive, and footwear industries, promoting sustainability.
