Photoacoustic imaging (optoacoustic imaging) is a biomedical imaging modality based on the photoacoustic effect. This report counts devices that use Photoacoustic imaging (optoacoustic imaging) technology. In 2024, global Photoacoustic imaging production reached approximately 610 units, with an average global market price of around k US\$ 237.9 per unit.

With the advancement of life sciences and the increasing demands of medical diagnostics, traditional medical imaging equipment is no longer adequately meeting the practical needs of research and clinical practice, leading to the rapid growth of the photoacoustic imaging system market. Photoacoustic imaging can produce high-resolution and high-contrast tissue images. This technology provides a valuable tool for studying the structural morphology, metabolic function, physiological characteristics, and pathological features of biological tissues, and has broad application prospects across the entire range of tissue structure and functional imaging. Global photoacoustic imaging key players include iThera Medical GmbH, FUJIFILM VisualSonics, Kibero, etc. Global top three manufacturers hold a share about 75%. North America is the largest market, with a share over 40%, followed by Europe, and China.
