Photocatalyst mesh is a composite material filter made of photocatalyst materials (such as nano-sized titanium dioxide) as the main component, which is coated or embedded on the filter carrier through a special process. Under light conditions, this filter can use the photocatalytic effect of photocatalyst to oxidize and decompose harmful organic matter, pollutants, odors and bacteria in the air such as formaldehyde, benzene, xylene, TVOC into harmless carbon dioxide and water, thereby achieving the purpose of purifying the air.
