Photographic paper is a paper coated with a light-sensitive chemical formula, like photographic film, used for making photographic prints. When photographic paper is exposed to light, it captures a latent image that is then developed to form a visible image; with most papers the image density from exposure can be sufficient to not require further development, aside from fixing and clearing, though latent exposure is also usually present.

Global key players of photographic paper include Fujifilm, FeliX Schoeller, Mitsubishi Paper Mills, etc. The top three players hold a share about 70%. The global photographic paper are mainly produced in Japan, North America and Europe, they occupied for a share over 80%.
