The leading type is Silver Halide Photo Paper, with a market share about 70%.

Based on the product Application, the Photographic Paper is primarily split into Civil Field and Professional Field. The largest segment is Civil Field.

Photographic paper is a paper coated with a light-sensitive chemical formula, like photographic film, used for making photographic prints. When photographic paper is exposed to light, it captures a latent image that is then developed to form a visible image; with most papers the image density from exposure can be sufficient to not require further development, aside from fixing and clearing, though latent exposure is also usually present.
