## Abstracts

The global Photoinitiator EHA market size is expected to reach \$ 167 million by 2032, rising at a market growth of 3.7% CAGR during the forecast period (2026-2032). Global sales of Photoinitiator EHA was about 10860 tons in 2025 with average price of 11520 USD/ton. The average gross margin of the industry is between 20%-25%.

Photoinitiator EHA is a liquid additive widely used in UV/LED curing systems. In industry, it is often sold under names such as Omnirad EHA or SpeedCure EHA. Strictly speaking, EHA is not a standalone primary photoinitiator in the narrow technical sense; it is more accurately classified as an amine synergist / co-initiator. When used together with Norrish Type II photoinitiators such as benzophenone-type materials, it helps generate free radicals, improves surface cure, and reduces oxygen inhibition in radiation-curable formulations. It is mainly used in UV-curable coatings, inks, adhesives, and related acrylate-based systems.

This report studies the global Photoinitiator EHA production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Photoinitiator EHA and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
