According to our (Global Info Research) latest study, the global Photoinitiator EHA market size was valued at US\$ 129 million in 2025 and is forecast to a readjusted size of US\$ 167 million by 2032 with a CAGR of 3.7% during review period.

Global sales of Photoinitiator EHA was about 10860 tons in 2025 with average price of 11520 USD/ton. The average gross margin of the industry is between 20%-25%.

Photoinitiator EHA is a liquid additive widely used in UV/LED curing systems. In industry, it is often sold under names such as Omnirad EHA or SpeedCure EHA. Strictly speaking, EHA is not a standalone primary photoinitiator in the narrow technical sense; it is more accurately classified as an amine synergist / co-initiator. When used together with Norrish Type II photoinitiators such as benzophenone-type materials, it helps generate free radicals, improves surface cure, and reduces oxygen inhibition in radiation-curable formulations. It is mainly used in UV-curable coatings, inks, adhesives, and related acrylate-based systems.
