## Abstracts

The global Photoinitiator market size is expected to reach \$ 1107.1 million by 2029, rising at a market growth of 3.8% CAGR during the forecast period (2023-2029).

Photoinitiators industry has low technology barrier and is labor intensive industry. Currently, there are many producing companies in the world photoinitiators industry. The main market players are IGM Resins, Tianjin Jiuri New Materials, Tronly, Hubei Gurun and DBC, etc. In consumption market, Europe and Asia Pacific are the mainly consumption regions due to the bigger demand of downstream applications. These two regions occupied 81.86% of the global consumption volume in total.

Photoinitiator, known as a photosensitizer or the photocuring agent, it is a type of compound which is capable of absorbing energy of certain wavelengths in the ultraviolet region (250 ~ 420nm) or in the visible region (400 ~ 800nm) to generate free radicals, cations, giving rise to a crosslinking and polymerization of the monomer. Photoinitiator is a key component of light-curing materials, which plays a decisive role to the light curing speed.

This report studies the global Photoinitiator production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Photoinitiator, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
