Photometric Analyzer is a device that uses optical technology to quantitatively analyze the chemical composition of a sample by measuring the absorption, transmission, reflection or scattering of light. The instrument is based on the principle of photometry and usually determines the concentration or other related properties of the target substance by detecting the changes after a specific wavelength of light interacts with the substance in the sample. Photometric analyzers are widely used in many fields such as chemistry, clinical diagnosis, environmental monitoring, food safety, etc.
