## Abstracts

According to our (Global Info Research) latest study, the global Photon Counting Linear Array Detector market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Photon counting linear array detector (PCLAD) is a detector used in X-ray imaging applications. It consists of a linear pixel array, each pixel capable of detecting a single X-ray photon. Unlike traditional X-ray detectors that measure the total energy deposited by X-rays in a given area, PCLAD can detect and count individual photons. This allows for higher resolution and sensitivity in X-ray imaging applications. When X-ray photons collide with pixels in PCLAD, they generate a charge that is detected and counted by the pixels. By analyzing the photon counting patterns in the array, the image of the X-ray source can be reconstructed with high accuracy. PCLAD has a wide range of applications in the field of X-ray imaging, including medical imaging, materials science, and non-destructive testing. They are particularly useful in high-resolution imaging applications that require low-dose X-ray sources, such as mammography and dental imaging.
