Abstracts

A photoresist is a light-sensitive material used in several processes, such as photolithography and photoengraving, to form a patterned coating on a surface. This process is crucial in the electronic industry.[1] The process begins by coating a substrate with a light-sensitive organic material. A patterned mask is then applied to the surface to block light, so that only unmasked regions of the material will be exposed to light. A solvent, called a developer, is then applied to the surface. In the case of a positive photoresist, the photo-sensitive material is degraded by light and the developer will dissolve away the regions that were exposed to light, leaving behind a coating where the mask was placed. In the case of a negative photoresist, the photosensitive material is strengthened (either polymerized or cross-linked) by light, and the developer will dissolve away only the regions that were not exposed to light, leaving behind a coating in areas where the mask was not placed.

Scope of the Report:

This report focuses on the Photoresist in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The semiconductors & ICs application segment accounted for the largest share of the global photoresist market in 2017. This segment is expected to continue its dominance during the forecast period. Photoresist is used in the semiconductors industry to imprint the desired circuitry and obtain ICs as the end product.

The Asia-Pacific region accounted for the largest share of the global photoresist market in 2017. Taiwan is estimated to account for the largest share of the Asia-Pacific photoresist market in 2017; however, this market in China is anticipated to grow at the highest CAGR during the forecast period.

The worldwide market for Photoresist is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
