The photothermal power generation molten salt pump is a pump used to transport high-temperature molten salt. It is mainly used in solar photothermal power generation systems and is one of the key equipment in the photothermal power generation system?. The design and operation requirements of the solar thermal power generation molten salt pump are very high. It needs to have high reliability and solve technical difficulties in terms of heat dissipation and cooling system, bearing support, sealing and adaptability to the flow characteristics of molten salt at different temperatures. By utilizing the characteristics of molten salt such as high boiling point, low viscosity, low vapor pressure and high volume heat, molten salt energy storage technology can achieve stable and continuous power supply for 24 hours, with the advantages of being adjustable, more friendly to the grid, and more compatible?.
