According to our (Global Info Research) latest study, the global Phototransistor Optocouplers market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Photocrystal tube optocoupler is an electronic device, which uses the combination of optical coupling transmitter and phototransistor output to provide electrical isolation between two circuits. The optocoupler is composed of an LED and a phototransistor. The LED emits light when the current passes, and the phototransistor responds to light by turning on or off according to the input signal. Photocrystal tube optocoupler is used in various applications requiring electrical isolation between two circuits.
