## Abstracts

The global Phototriac Coupler market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Phototriac Coupler is a device that couples a photodiode and a thyristor (triac) together. It has the control ability of two directions, which can realize the bidirectional control of the current. It can be used in switch control, photoelectric isolation, electrical isolation and circuit protection of electrical equipment. Due to its bidirectional control characteristics, the photoelectric triac coupler can realize fast switching operation when the current flows in the reverse direction, and has high reliability and stability.
