## Abstracts

According to our (Global Info Research) latest study, the global Photovoltaic Buckle Short Frame market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The short frame of the photovoltaic clip refers to the frame of the photovoltaic module assembled from rubber parts and aluminum alloy parts. At present, the short frame of the photovoltaic clip has the advantages of low production and maintenance costs, convenient transportation and installation, strong fastening, and long life. But at the same time, compared with the four-point support method of the traditional frame, the short frame of the photovoltaic clip has only two points of support, and the load performance is poor. Currently, it can only be used for double-glass components and flexible components, and its application range is relatively limited.
