Abstracts

The global Photovoltaic Buckle Short Frame market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The short frame of the photovoltaic clip refers to the frame of the photovoltaic module assembled from rubber parts and aluminum alloy parts. At present, the short frame of the photovoltaic clip has the advantages of low production and maintenance costs, convenient transportation and installation, strong fastening, and long life. But at the same time, compared with the four-point support method of the traditional frame, the short frame of the photovoltaic clip has only two points of support, and the load performance is poor. Currently, it can only be used for double-glass components and flexible components, and its application range is relatively limited.

This report studies the global Photovoltaic Buckle Short Frame production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Photovoltaic Buckle Short Frame, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
