Abstracts

According to our (Global Info Research) latest study, the global Photovoltaic Carport Support System market size was valued at US\$ 2037 million in 2025 and is forecast to a readjusted size of US\$ 3925 million by 2032 with a CAGR of 10.0% during review period.

A photovoltaic (PV) carport support system is a structural support system that integrates solar photovoltaic modules and installs them on a carport. Through reasonable structural design and layout, it provides sun protection for parked vehicles while simultaneously generating electricity. It combines space utilization, energy production, and architectural functions, and is widely used in public parking lots, residential communities, commercial centers, industrial parks, power plants, and highway service areas. The main body of the PV carport support system is mostly made of high-strength aluminum alloy (such as anodized aluminum) or hot-dip galvanized steel to ensure high corrosion resistance and long service life in harsh environments. It achieves an organic combination of 'PV + parking,' not only charging electric vehicles but also allowing surplus electricity to be connected to the grid.

Upstream The upstream sector primarily includes suppliers of raw materials and key components, such as steel, aluminum profiles, bolts, nuts, anti-corrosion coating materials, and photovoltaic modules, providing the structural strength and corrosion resistance foundation for the support system. The midstream consists of photovoltaic carport support system manufacturers, who process raw materials and components into standardized or customized support systems through structural design, profile processing, assembly, and anti-corrosion treatment, and provide installation guidance and after-sales service. The downstream sector comprises end users such as parking

lots, residential communities, commercial centers, industrial parks, and highway service areas.

In 2025, global sales of photovoltaic carport support systems reached 98,000 units, with a production capacity of approximately 135,000 units, an average selling price of US\$20,200 per unit, and an average gross profit margin of 20%-25%.

The supply of photovoltaic (PV) carport support systems primarily relies on the traditional PV support manufacturing industry chain and the parking infrastructure sector. Global production is concentrated in China, Europe, and North America. Chinese companies have a clear advantage in terms of production capacity, manufacturing costs, and export capabilities, leading to fierce competition among numerous small and medium-sized support manufacturers. European and American suppliers, on the other hand, focus more on engineering design standards, structural safety, and integrated project solutions.

Demand for PV carport support systems mainly comes from commercial parking lots, business parks, residential communities, public facilities (such as hospitals and schools), and highway service areas. The dual function of PV power generation and parking shading makes it highly attractive to those seeking low electricity costs. With the advancement of new energy subsidy policies and green building standards, businesses and public sectors are increasingly adopting PV carports to reduce energy costs and carbon emissions. Furthermore, the widespread adoption of new energy vehicles and the construction of charging infrastructure indirectly drive demand for carport support systems, becoming a significant source of market growth in the coming years.

Product evolution mainly focuses on material optimization, structural design, and ease of installation. Early products mostly used ordinary galvanized steel or aluminum alloy profiles, with simple structures. As demand has increased, high-strength lightweight materials, modular designs, and adjustable tilt angle solutions have emerged to improve load-bearing capacity and adapt to various geographical and climatic conditions. The technological roadmap is also developing towards standardized modules + quick-connect fittings and compatible tracking systems, improving the power generation efficiency and installation efficiency of photovoltaic modules.
