According to our (Global Info Research) latest study, the global Photovoltaic DC Isolation Switch market size was valued at US\$ 2329 million in 2024 and is forecast to a readjusted size of USD 5971 million by 2031 with a CAGR of 14.4% during review period.

Photovoltaic DC isolation switches are key electrical equipment used to safely isolate DC circuits in photovoltaic power generation systems. Their main function is to cut off the DC power supply during system maintenance, fault repair or emergency situations to ensure personnel safety and equipment protection. Since photovoltaic arrays usually output high-voltage DC power with large currents, DC isolation switches must have high withstand voltage, strong arc extinguishing capability, high temperature resistance and corrosion resistance, and meet the requirements of long-term stable operation in harsh outdoor environments. Their design must comply with international standards and be adapted to the special needs of photovoltaic systems.
