According to our (Global Info Research) latest study, the global Photovoltaic Fuse market size was valued at US\$ 1510 million in 2025 and is forecast to a readjusted size of US\$ 2309 million by 2032 with a CAGR of 6.3% during review period.

In 2024, global Solar PV Fuse production reached approximately 193,600 k units?with an average global market price of around US\$ 5.4 per units. Single-line production capacity is approximately 3 million pieces per year. Photovoltaic Fuse is a protective device specifically engineered for solar power generation systems to prevent damage from overcurrent conditions in direct current (DC) circuits. They provide reliable circuit protection by interrupting short circuits, reverse currents, or overloads within PV modules, strings, combiner boxes, or inverters. By quickly isolating faulty sections of the system, photovoltaic fuses enhance operational safety, reduce the risk of fire or equipment damage, and ensure stable performance of the entire solar power installation.

It is expected that global demand for photovoltaic products will remain high in the next few years. According to our PV & Solar Research Center, by the end of 2022, the global cumulative installed photovoltaic power generation capacity is about 1180 GW. According to the data of China Photovoltaic Industry Association, the global newly installed photovoltaic capacity in 2022 is about 230 GW, and this number in 2023 is predicted to be 280-330 GW. According to the data of the Ministry of Industry and Information Technology, the total output value of China's photovoltaic industry exceeded 1.4 trillion yuan in 2022. From the perspective of production value, mainland China is still the global center of the PV industry. According to the International Energy Agency, China market share in all key products of the supply chain have exceeded

80%. Among them, the production capacity of silicon wafers, solar cells, and components accounts for as high as 98%, 85% and 77%, respectively. According to the data released by the European Photovoltaic Association, 27 EU countries gained a new PV installed capacity of 41.4 GW in 2022. According to the report of the US Solar Energy Industries Association (SEIA), the US held a new PV installed capacity of less than 19 GW in 2022. But it is estimated that from 2023, the average annual growth rate of new photovoltaic installed capacity will exceed 21%. In terms of Japan, based on data from Fitch and the US Energy Information Administration (EIA), in 2022, Japan's newly installed photovoltaic capacity was 3.81 GW.
