Abstracts

The global Photovoltaic Grid-connected Solution market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Photovoltaic grid-connected solution refers to a solution that connects a solar photovoltaic (PV) system to the public grid, enabling self-consumption and excess power to be sold back to the grid. The Photovoltaic grid-connected system uses inverters to convert DC power to AC power which works in sync with the public grid. The electricity generated is then supplied to households or commercial/industrial facilities, while excess electricity is fed back into the grid and subsidized or sold, in accordance with national policies. Photovoltaic grid-connected solutions can improve the economic benefits of solar power generation systems, reduce dependence on the public grid, and have advantages such as being environmentally friendly, energy-saving, and sustainable, making them widely used in households, commercial, and industrial fields.
