## Abstracts

The global Photovoltaic Power Generation System market size is expected to reach \$ 50836 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

Photovoltaic power generation systems are complete solar energy solutions that convert sunlight directly into electricity using semiconductor-based solar cells. Unlike standalone solar panels, a complete PV system integrates solar modules, inverters (converting DC to AC), mounting structures, balance of system components (wiring, connectors, junction boxes), and optionally energy storage systems and monitoring platforms. Key system types include grid-connected PV systems (utility-scale, commercial, residential rooftop), off-grid systems (remote areas, backup power), and hybrid systems (grid-connected with battery storage). These systems are deployed across residential rooftops, commercial buildings, utility-scale solar farms, industrial facilities, and agricultural applications. From a value chain perspective, upstream includes polysilicon, wafer, cell, and module manufacturers; midstream involves inverters, mounting systems, balance of system components, and energy storage integration, plus EPC and system integrators; downstream demand spans utilities, IPPs, commercial installers, residential consumers, and O&M service providers. In 2025, the average selling price is approximately US\$120 per kW, global installed capacity is about 270,000 MW, and gross margins vary significantly by segment (module manufacturing 10%-20%; power plant operation 50%-60%), driven by silicon costs, inverter efficiency, balance of system component prices, and installation complexity.

### Module Prices Continue to Decline

The photovoltaic power generation system market is experiencing rapid growth driven

by declining module prices, supportive government policies, and increasing corporate renewable energy procurement commitments. Utility-scale solar levelized cost of energy has fallen dramatically over the past decade, making grid-connected PV one of the most cost-competitive power sources globally.

#### Global Capacity Expansion

Global solar PV capacity additions have reached record levels in recent years, with solar PV accounting for the majority of total renewable capacity additions. The industry continues to expand as countries worldwide accelerate their energy transition efforts.

#### Market Concentration Among Leading Manufacturers

The photovoltaic module manufacturing industry exhibits significant concentration, with top manufacturers accounting for the majority of global shipments. Chinese companies dominate global production capacity, holding over three-quarters of the market across key production chain stages including wafer, cell, and module manufacturing.

#### U.S. Market Dynamics

The U.S. solar industry continues to install substantial new capacity annually, with solar representing a significant share of all new electricity-generating capacity added to the grid. Module manufacturing capacity within the U.S. has grown considerably, though domestic production remains below demand levels.

#### Technological Evolution

N-type TOPCon technology has emerged as the mainstream product in the market, gradually replacing older cell technologies. Manufacturers continue to advance cell efficiency and reduce production costs through technological innovation.
