According to our (Global Info Research) latest study, the global Photovoltaic Recycling Services market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The development prospects of photovoltaic recycling services are closely related to the size of the photovoltaic market and the amount of waste of photovoltaic modules. As the photovoltaic market continues to expand, the production and demand for photovoltaic modules continue to increase. However, the service life of photovoltaic modules is only about 25 years, and they need to be replaced after expiration. Therefore, the number of discarded modules is also increasing year by year. If these discarded components are not properly disposed of, they will cause serious pollution to the environment. Therefore, the prospects of the photovoltaic recycling industry are very bright.
