Abstracts

The global Photovoltaic System Operation Service market size is expected to reach \$ 5707 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

Photovoltaic System Operation Services refer to continuous operational services provided after PV power plants or distributed photovoltaic systems are completed and put into operation. These services typically cover power generation monitoring, operation scheduling, module cleaning, equipment inspection, inverter maintenance, fault diagnosis, performance analysis, electricity settlement, asset management, safety management, and coordinated operation with energy storage, EV charging, and microgrid systems. Compared with basic maintenance, photovoltaic system operation services focus more on full-lifecycle management of PV assets, with the main goal of ensuring stable operation, improving power generation efficiency, reducing downtime losses, and enhancing overall project returns.

The Photovoltaic System Operation Services market is moving from manual inspection and basic maintenance toward digital, intelligent, and integrated energy operation models. With the continued growth of utility-scale PV plants, commercial and industrial distributed PV, residential PV, and PV-storage-charging integrated projects, service providers are increasingly adopting remote monitoring, AI-based fault diagnosis, drone inspection, power generation forecasting, intelligent cleaning, energy storage dispatching, power trading, and carbon asset management. Overall, photovoltaic system operation services are evolving from basic equipment operation support into comprehensive energy operation services focused on improving power generation revenue, optimizing energy use, participating in electricity markets, and supporting low-carbon management.
