Abstracts

According to our (Global Info Research) latest study, the global Photovoltaic XBC Tabber and Stringer market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

XBC (cross-finger back contact cell) technology is a type of N-type high-efficiency photovoltaic cell technology. It eliminates the front metal electrode structure, has no grid lines on the front of the cell, has 'zero shielding' on the front of the module, has no silver paste printing costs, and has unparalleled beauty in pure black modules. Its higher efficiency achieves higher power generation, giving XBC cells an absolute advantage in distributed photovoltaics and will become the mainstream of the industry in the future. However, for a long time, the expansion and promotion of XBC cell technology has been greatly restricted due to the complexity of cell processes and equipment.

This report is a detailed and comprehensive analysis for global Photovoltaic XBC Tabber and Stringer market.
