According to our (Global Info Research) latest study, the global Phycobiliproteins market size was valued at US\$ 103 million in 2024 and is forecast to a readjusted size of USD 282 million by 2031 with a CAGR of 15.6% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Phycobiliprotein are water-soluble proteins present in cyanobacteria and certain algae, for example rhodophytes, cryptomonads, glaucocystophytes, that capture light energy, which is then passed on to chlorophylls during photosynthesis. Phycobiliproteins are formed of a complex between proteins and covalently bound phycobilins that act as chromophores. They are most important constituents of the phycobilisomes.

Global Phycobiliprotein key players include DIC Corporation, King Dnarmsa Spirulina, Zhejiang Binmei Biotechnology, Parry Nutraceuticals, etc. Global top four manufacturers hold a share over 60%.

North America is the largest market, with a share over 40%, followed by China, and India, both have a share about 45 percent.

In terms of product, Food Grade is the largest segment, with a share about 90%. And in terms of application, the largest application is Natural Food Colorant, followed by Dietary Supplement, Cosmetics, etc.
