According to our (Global Info Research) latest study, the global Physcion market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Roots from *Rheum palmatum* L?It has antibacterial effect. It is mainly used as a cathartic. Emodin methyl ether can be used to study antibiotics, antimicrobials, bioactive small molecules and cell biology.

Emodin Physcion was mainly used in the pharmaceutical industry at the early stage. At present, with the deepening of research, the application of Physcion in agriculture has been gradually opened up. Physcion, which is made from natural plant rhubarb, is a highly active botanical fungicide after careful extraction of its active ingredients and processing. Practice has proved that 0.5% Emodin methyl ether AS has good control effect on powdery mildew, downy mildew, gray mold, anthrax, etc. Chemicalbook is low toxic to humans and animals, friendly to the environment, and is not easy to produce drug resistance. Because it contains a lot of humic acid and amino acids, it can also effectively promote the growth of new shoots and shoots of crops. It can be used as a substitute for conventional high toxic and high residue pesticides, especially suitable for the production of green and organic vegetables. Emodin methyl ether is a protective fungicide, which can induce crops to have a defense reaction, inhibit the germination of pathogenic spores, the growth of mycelia, and the formation of haustorium, so as to protect crops from the invasion of pathogenic bacteria and achieve the effect of disease prevention. Emodin methyl ether has inhibitory effect on 26 kinds of bacteria, including *Staphylococcus aureus*, *Escherichia coli*, *Pseudomonas aeruginosa*, *Streptococcus* and *Shigella*
