The global Physical Positioning for Radiotherapy market size is expected to reach \$ 157.8 million by 2030, rising at a market growth of 8.6% CAGR during the forecast period (2024-2030).

The Physical Positioning for Radiotherapy market is driven by the imperative need for precise patient alignment during cancer treatment. These devices, including immobilization and positioning aids, play a critical role in ensuring accurate and reproducible patient positioning for radiotherapy sessions. The demand for improved treatment accuracy, minimizing radiation exposure to healthy tissues, propels market growth. Physical positioning products contribute to treatment efficacy by enhancing target localization and reducing setup uncertainties. As radiotherapy remains a cornerstone in cancer management, the adoption of advanced physical positioning devices continues to drive innovations, optimizing treatment delivery and contributing to better patient outcomes in oncology.

Physical positioning for radiotherapy involves the accurate and reproducible alignment of a patient in a specific position to ensure that the radiation beams precisely target the tumor while minimizing exposure to surrounding healthy tissues. The goal is to deliver the prescribed dose of radiation therapy to the tumor while sparing nearby normal tissues.
