According to our (Global Info Research) latest study, the global Phacoemulsification Systems market size was valued at USD 198.3 million in 2023 and is forecast to a readjusted size of USD 450.6 million by 2030 with a CAGR of 12.4% during review period.

In cataract surgery, there is an ever present need to preserve the delicate structures of the eye while removing an opaque lens. The most modern method is phacoemulsification, whereby the lens is emulsified with ultrasound before being suctioned out. Phacoemulsification systems provide a platform for performing cataract surgery, as well anterior vitrectomy.

For a phacoemulsification system, one of the most important features will be the suction/vacuum component. Pumping systems are usually peristaltic or Venturi (aspirating). Some phaco and vitrectomy systems have dedicated microprocessors to measure in-line vacuum pressure.
