Abstracts

The global Phytase Feed Additive market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Phytase feed additive is an enzyme preparation that contains phytase. Phytase is a type of enzyme that is added to animal feed to improve the utilization of phosphorus and other minerals. It catalyzes the breakdown of phytic acid, a form of phosphorus that is naturally present in plant-based feed ingredients, into more bioavailable forms. In monogastric animals like pigs and poultry, phytase plays a crucial role in enhancing the digestion and absorption of phosphorus and other minerals.

This report studies the global Phytase Feed Additive production, demand, key manufacturers, and key regions.
