Pick to Voice (PTV) system refers to an integrated voice picking and packing system where operators wear headsets and receive real-time instructions via wireless communication devices such as smartphones or tablets. The software typically provides step-by-step guidance through each order, allowing workers to find and collect items more efficiently.

The pick to voice system market growth is being driven by the increasing demand for e-commerce, the need for improved warehouse efficiency, and the rising adoption of automation in warehouses.

E-commerce is growing rapidly and is expected to continue to grow in the coming years. This growth is driving the demand for pick to voice systems, as e-commerce retailers need to be able to efficiently pick and pack orders to meet the demands of their customers.

The need for improved warehouse efficiency is also driving the growth of the pick to voice system market. Warehouses are under increasing pressure to operate more efficiently in order to reduce costs and improve customer service. Pick to voice systems can help warehouses to improve efficiency by reducing the time it takes to pick and pack orders.

The rising adoption of automation in warehouses is also driving the growth of the pick to voice system market. Pick to voice systems are often used in conjunction with other automation technologies, such as barcode scanners and conveyor systems. This combination of technologies can help warehouses to achieve even greater levels of efficiency.
