Abstracts

According to our (Global Info Research) latest study, the global Piezo MEMS Inkjet Heads market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Today, there are two primary types of inkjet print head technologies in use: Piezo and Thermal. In the Epson Micro Piezo print head, microscopic piezoelectric elements (like crystals and ceramics) are built behind the print nozzles. When an electrical charge is applied to them, these elements bend backward, forcing precise amounts of ink onto the substrate. Because electrical charges can be turned on and off like a switch, there is a vast amount of control over the rate of ink being ejected through the nozzle while also creating perfectly spherical dots at different droplet sizes. This report studies the Piezo MEMS Inkjet Heads market.
