According to our (Global Info Research) latest study, the global Piezoceramic market size was valued at USD 7718.6 million in 2023 and is forecast to a readjusted size of USD 10110 million by 2030 with a CAGR of 3.9% during review period.

The Piezoceramic is a kind of functional ceramic materials which can create electricity when subjected to a mechanical stress. They will also work in reverse, generating a strain by the application of an electric field. In sensors they make it possible to convert forces, pressures and accelerations into electrical signals, and in sonic and ultrasonic transducers and actuators they convert electric voltages into vibrations or deformations.

In the global piezoelectric devices market, APAC held the highest share in 2017. Globally, the largest amount of research on piezoelectric materials and devices is undertaken in Japan. Several experiments on microscale applications of piezoelectric technology have been carried out in Japan, including the usage of this technology in floors of train stations to generate electricity. Owing to this, the market in APAC is expected to grow at the highest rate in the coming years.
