Abstracts

According to our (Global Info Research) latest study, the global Piezoelectric Aperture market size was valued at US\$ 334 million in 2024 and is forecast to a readjusted size of USD 435 million by 2031 with a CAGR of 3.9% during review period.

The piezoelectric aperture is a special optical element that uses the piezoelectric effect to control the on and off of the light beam or adjust the parameters of the light beam. The piezoelectric effect means that when the internal structure of a piezoelectric material changes under the action of mechanical stress, its positive and negative charges accumulate at both ends of the material, thereby generating an amount of charge proportional to the applied mechanical stress, thereby measuring the stress.
