According to our (Global Info Research) latest study, the global Piezoelectric Bimorph market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A piezoelectric bimorph is a type of piezoelectric device composed of two piezoelectric elements bonded together. Piezoelectric materials have the unique property of generating an electric charge when subjected to mechanical stress and, conversely, undergoing mechanical deformation when subjected to an electric field. When two piezoelectric elements with opposite polarization are bonded together, they form a bimorph structure.

Piezoelectric bimorphs are versatile devices that find applications in various industries and technologies, including aerospace, robotics, medical devices, automotive systems, precision instruments, and energy harvesting, where their ability to convert between mechanical and electrical energy offers unique benefits for actuation, sensing, and control purposes.
