Abstracts

The global Piezoelectric Dispenser Valve market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Piezoelectric glue spray valve is a valve device that uses piezoelectric effect to control glue spraying. The piezoelectric effect is a phenomenon in which a material deforms when excited by an external electric field, and this deformation can be controlled by switching the electric field. Piezoelectric dispensing valves are typically made of piezoceramic materials that deform when excited by an electric field, causing the valve to switch on and off. Piezoelectric glue spray valves are widely used in the field of glue spraying, such as precision glue coating, automatic spraying, printing, electronic assembly and other fields. Its advantages include fast response, precise control, no need for mechanical parts, etc. By controlling the size and frequency of the electric field, the spraying speed, flow rate and spraying pattern of the spray valve can be adjusted, so as to achieve precise spraying under different requirements. Piezoelectric glue spray valve has wide application prospects in high-precision glue spraying process.
