A piezoelectric vibrator is a device that uses the piezoelectric effect to convert electrical energy into mechanical vibration or vice versa. The piezoelectric effect refers to the fact that certain materials (such as quartz, piezoelectric ceramics, etc.) generate electric charges when subjected to mechanical stress, and vice versa, they produce mechanical deformation when an electric field is applied. Piezoelectric vibrators are usually composed of piezoelectric materials and electrodes, and are widely used in electronics, communications, medical care, industry and other fields.
