The global Piezoresistance Accelerometer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A piezoresistive accelerometer is an accelerometer that uses the piezoresistive effect to measure acceleration. It is made of a piezoresistive material that deforms when a force is applied where the change in resistance is measured. Piezoresistive accelerometers are known for their high sensitivity and low noise levels, making them ideal for applications requiring the precise measurement of small accelerations, such as vibration analysis, shock testing, and vehicle suspension testing. They are also commonly used in aerospace, automotive and industrial applications.
