Abstracts

The global Piezoresponse Force Microscopy (PFM) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Piezoresponse force microscopy (PFM) is a variation of atomic force microscopy (AFM) that uses a conductive probe tip to measure the piezoelectric, and more commonly the ferroelectric, domains of a material. Unlike many other variations of AFM, PFM does not take any principles from other techniques. Instead, it applies the principles of the piezoelectric effect to obtain measurements, alongside the conventional AFM location techniques to determine which domains are being measured. This enables the simultaneous creation of a topographic map, alongside a ferroelectric domain map which has a high spatial resolution.

This report studies the global Piezoresponse Force Microscopy (PFM) production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Piezoresponse Force Microscopy (PFM), and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
