According to our (Global Info Research) latest study, the global Pig Automatic Feeding System market size was valued at US\$ 277 million in 2025 and is forecast to a readjusted size of US\$ 477 million by 2032 with a CAGR of 8.3% during review period.

In 2025, global production of Pig Automatic Feeding System was approximately 102,293 units, with an average global market price of around US\$2,634 per unit. The gross margin was about 34%, with an estimated cost of approximately US\$1,738 per unit. Global production capacity was approximately 126,600 units. Pig Automatic Feeding System is an automated feeding solution designed for pig farming operations, integrating feed storage units, conveying mechanisms, automatic feeders, control modules, and monitoring devices to enable automatic feed storage, transportation, distribution, and precise feeding. The system can adjust feeding quantity and frequency according to pig categories, growth stages, nutritional requirements, and farm management strategies, reducing manual labor, improving feed utilization efficiency, lowering production costs, and enhancing the automation level of pig farm operations. It is widely used in sow farms, nursery farms, fattening farms, and large-scale intensive pig production facilities.

Driven by the expansion of large-scale livestock farming, rising labor costs, and the development of smart agriculture, pig automatic feeding systems are evolving from basic automated feeding equipment into intelligent precision feeding platforms. Future systems will increasingly integrate IoT, artificial intelligence, automatic identification technologies, big data analytics, and farm management software to achieve dynamic feeding optimization based on animal weight, health conditions, and feeding behavior. The growing demand for efficient, sustainable, and biosecure livestock production will

further accelerate the adoption of automated feeding systems in modern pig farms worldwide.
