Abstracts

According to our (Global Info Research) latest study, the global Pig Farm Information Management System market size was valued at US$ 495 million in 2025 and is forecast to a readjusted size of US$ 876 million by 2032 with a CAGR of 8.4% during review period.

The pig farm information management system is a digital platform based on the Internet of Things, big data and artificial intelligence technologies, which is used to monitor and manage the entire pig farming process in real time. It can automatically collect data on the growth, health, environment and other aspects of the pigs, intelligently analyze the feeding status, optimize key links such as feed feeding, disease warning, and reproduction management, improve farming efficiency, reduce costs, and realize traceable and visualized intelligent farming.

The growth of the Pig Farm Information Management System market is primarily driven by the increasing scale and consolidation of swine production and the rising need for more refined and data-driven farm management. As herd sizes expand and large producers operate multiple farms across different regions, traditional management methods based on paper records, spreadsheets and manual experience are becoming insufficient in terms of data timeliness, accuracy, traceability and cross-farm coordination, encouraging producers to adopt integrated information systems covering animal records, breeding, grow-finish production, feed, veterinary drugs, inventory, costs, labor and business analytics. At the same time, rising feed, labor, biosecurity and energy costs are increasing the importance of digital monitoring of key performance indicators such as sow productivity, feed conversion ratio, mortality and unit production cost, while ongoing animal disease risks are strengthening demand for biosecurity

management, health records and end-to-end traceability. In addition, advances in cloud computing, mobile technologies, RFID, IoT sensors and data analytics are enabling pig farm information systems to evolve from basic record-keeping tools into integrated platforms connecting production, equipment and business management, supporting continued market expansion.
