## Abstracts

The global Pigment Paste market size is expected to reach \$ 426 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

In 2025, global pigment paste production reached approximately 44 kilotons, the average price is 7000 usd/ton. Pigment paste is essentially a highly concentrated liquid dispersion of pigments. After precise processing, it can be evenly distributed in materials such as plastics, coatings, or rubber. High-quality color paste requires excellent dispersibility to ensure that the pigments are fine and uniform, so that the finished product will exhibit bright and stable colors. At the same time, color paste must have good high-temperature resistance, UV resistance, and chemical resistance. These properties enable it to maintain its color and performance for a long time in harsh environments.

The annual production capacity of a single pigment paste production line is typically 1000-2000 tons/year, with a gross profit margin of around 28%.

This report studies the global Pigment Paste production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Pigment Paste and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
