Abstracts

According to our (Global Info Research) latest study, the global Pillow Rolling Machine market size was valued at US$ 154 million in 2025 and is forecast to a readjusted size of US$ 216 million by 2032 with a CAGR of 4.9% during review period.

A Pillow Rolling Machine is a specialized industrial packaging device designed to compress and roll finished pillows into a compact, cylindrical shape. By utilizing high-pressure rollers or a vacuum-suction mechanism, the machine significantly reduces the physical volume of soft bedding products—such as fiberfill, memory foam, or latex pillows—without damaging their internal structure. The primary application of this technology is to optimize logistics by minimizing storage space and reducing shipping costs, particularly for e-commerce "Direct-to-Consumer" models where compact packaging is essential for standard courier delivery.

In 2025, global Pillow Rolling Machine production reached approximately 3000 units and average price was 50000 usd/unit, with gross margin 20%.
