Abstracts

According to our (Global Info Research) latest study, the global PIM Testing System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

PIM testers detect when two or more nonlinear signals mix, which can cause major problems in the network. This signal mixing can be the result of contamination, corrosion, and poorly torqued RF connections, resulting in nonlinear junctions. For cellular operators, this is a serious problem. When PIM issues arise, network reliability, data rates, capacity, and return on investment are all at stake.
