Abstracts

According to our (Global Info Research) latest study, the global Pink Corundum market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Pink Corundum, also known as Pink Fused Alumina, is a specialized abrasive material derived from high-quality bauxite. It is produced through the fusion of bauxite in an electric arc furnace at high temperatures, similar to other corundum varieties. Pink Corundum gets its characteristic pink color due to the presence of chromium oxide impurities. It possesses excellent hardness, toughness, and abrasive properties. Pink Corundum is widely used in grinding, lapping, and polishing applications, especially in the precision machining and optical industries, where its fine particle size and consistent performance are highly valued.

The industry trend of Pink Corundum is driven by the increasing demand for precision machining and high-quality surface finishes. As industries such as automotive, aerospace, and electronics focus on achieving tighter tolerances and superior surface qualities, the demand for Pink Corundum for precision grinding and polishing applications is growing. The trend involves the development of finer grit sizes and improved particle distribution to enhance surface finish and edge sharpness. Pink Corundum also offers advantages in terms of lower heat generation and reduced friction during grinding processes. Additionally, there is a focus on sustainable production methods and responsible sourcing of raw materials to align with environmental concerns.
