Abstracts

Chemicals from pine trees occur naturally and are thus environmentally friendly. Their use leads to lower emissions of carbon dioxide as opposed to those from conventional sources. The widespread use of crude oil and natural gas products in the recent past has contributed to increased emissions and environmental issues. Consequently, there is a growing need to reduce fossil fuel consumption to minimize carbon footprints and carbon dioxide emissions. The pine-derived chemicals industry has continuously adapted itself over centuries and is today at the forefront of renewable bio-based industries.
