Abstracts

The global Pipe Coating Service market size is expected to reach \$ 745 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

Pipe Coating Service refers to professional services providing surface treatment, internal and external anti-corrosion coatings, insulation layers, concrete counterweight layers, on-site joint repair, inspection and repair, and quality certification for steel pipes, ductile iron pipes, oil well pipes, submarine pipelines, water pipes, chemical pipelines, gas pipelines, and municipal pipe networks. Its core purpose is to improve the pipeline's resistance to corrosion, wear, chemical media, cathodic disbondment, high temperatures, seawater, insulation, and service life. Typical services include sandblasting/shot blasting, FBE fusion-bonded epoxy powder coating, 3LPE/3LPP three-layer polyethylene/polypropylene coating, internal epoxy coating, liquid epoxy, coal tar enamel, polyurethane, concrete counterweights, fireproof coatings, marine insulation coatings, and on-site joint repair coatings.

Long-distance oil and gas pipelines, subsea pipelines, gathering and transportation pipelines, oil well pipes, and LNG supporting pipelines require highly corrosion-resistant, cathodic disbondment-resistant, and insulating coatings, especially 3LPE, 3LPP, FBE, internal epoxy, and concrete counterweight coatings. Vallourec positions its pipeline coating services for both onshore and offshore applications, providing external corrosion protection and subsea insulation systems. In the replacement of aging water pipes, sewage pipes, industrial circulating water pipes, and fire-fighting pipelines, solutions such as internal epoxy, polyurethane, cement mortar linings, and ceramic/glass linings are used to improve water quality safety, reduce friction loss, and extend service life.
