Abstracts

According to our (Global Info Research) latest study, the global Pipe Jacking Machine Cutters market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The pipe jacking machine cutter is installed on the cutterhead of the pipe jacking machine. When the pipe jacking machine is pushed forward by the jacking force generated by the jacking equipment, the high-speed rotation of the cutterhead drives the cutter to roll, thereby producing the effects of impact crushing and shearing crushing, and finally breaking the rock and soil to form a tunnel. Pipe jacking cutters include disc cutters, rock-breaking cutters, cantilever cutters, scrapers, etc. Among them, disc cutters and scrapers are the same as similar products in shield and TBM cutters in terms of structure, working principle, manufacturing process, etc., but the size is relatively small. When the diameter of the pipe jacking machine is more than 1 meter, the cutter used is similar to the shield and TBM cutters; when the diameter of the pipe jacking machine is less than 1 meter, the disc cutter requires a large installation space and cannot be arranged on the cutterhead, so rock-breaking cutters or cantilever cutters are usually arranged.
